Key words: *special laws, organizational principles, normative acts, improvements.*

During the activity of our state, the issues of preventing and combating corruption were constantly discussed in the state, scientists, experts and representatives of law enforcement agencies were involved in this process. The acute systemic phenomena of corruption in our country began to manifest themselves in the early nineties of the last century, which prompted the state to take certain actions in this direction, by adopting appropriate legal acts. The first such legal document aimed at combating corruption in Ukraine should be considered the resolution of the Verkhovna Rada of Ukraine «On urgent measures to combat organized crime and corruption» of May 7, 1993, which was supposed to prepare and submit to the Verkhovna Rada of Ukraine a number of draft laws, aimed at combating corruption and organized crime. Despite the fact that this document was political and legal, it laid the foundations for the further legal policy of the state in the fight against corruption. Particularly acute anti-corruption issues have intensified in recent years, which has become a threat to human and citizen rights, the rule of law and democracy, law and order and social justice, has hindered the sustainable economic development of society, and reduces the investment attractiveness of Ukraine for investors, ruins investors confidence in the judiciary and law enforcement. This is evidenced by the discussion of this issue on the front pages of various mass media by representatives of different professions and public officials, since the negative attitude of society to corruption has become one of the many constituents that compel the state to take various legal measures to prevent and prevent corruption. At the same time, the adoption of a large number of legislative acts and the establishment of appropriate structures in the field of preventing and combating corruption in the country, while showing that today effective state policy of Ukraine in the field of corruption has not yet been developed, which requires further scientific research.
